Assay Name/Specification (minimum release criteria)

Functional Testing (NEBNext[®] FFPE DNA Library Prep Kit with FFPE DNA) - Libraries are prepared using 5 and 250 ng of human FFPE DNA using current and previous lots of the NEBNext[®] FFPE DNA Library Prep kit, NEBNext[®] Adaptor, and appropriate adaptor dilutions and PCR cycle numbers for each input amount as noted in the manual. Libraries are assessed for yield, size, and profile and then sequenced on an Illumina[®] platform to assess quality metrics including damaged base repair efficiency.

* **Individual Product Component Note** - Standard Quality Control Tests are performed for each component included in NEBNext[®] FFPE DNA Library Prep Kit and meet the designated specifications.
